A First Course in Scientific Computing Rubin H. Landau 2011-10-30 This book offers a new approach to introductory scientific computing. It aims to make students comfortable using computers to do science, to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers, and to show how all the pieces can work together. Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems, from energy use to the building of skyscrapers to projectile motion with drag. He is attentive to how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract. Landau covers the basics of computation, numerical analysis, and programming from a computational science perspective. The first part of the printed book uses the problem-solving environment Maple as its context, with the same material covered on the accompanying CD as both Maple and Mathematica programs; the second part uses the compiled language Java, with equivalent materials in Fortran90 on the CD; and the final part presents an introduction to LaTeX replete with sample files. Providing the essentials of computing, with practical examples, A First Course in Scientific Computing adheres to the principle that science and engineering students learn computation best while sitting in front of a computer, book in hand, in trial-and-error mode. Not only is it an invaluable learning text and an essential reference for students of mathematics, engineering, physics, and other sciences, but it is also a consummate model for future textbooks in computational science and engineering courses. A broad spectrum of computing tools and examples that can be used throughout an academic career Practical computing aimed at solving realistic problems Both symbolic and numerical computations A multidisciplinary approach: science + math + computer science Maple and Java in the book itself; Mathematica, Fortran90, Maple and Java on the accompanying CD in an interactive workbook format

Written by a leading expert in the coexistence of obsessive-compulsive and schizophrenic phenomena, Schizo-Obsessive Disorder uses numerous case studies to present diagnostic guidelines and to describe a recommended treatment algorithm, demystifying this complex disorder and aiding its effective management. The book is essential reading for psychiatrists, neurologists and the wider range of multidisciplinary mental health practitioners.

Envisioning Socialism Heather Gumbert 2014-02-10 Envisioning Socialism examines television and the power it exercised to define the East Germans' view of socialism during the first decades of the German Democratic Republic. In the first book in English to examine this topic, Heather L. Gumbert traces how television became a medium prized for its communicative and entertainment value. She explores the difficulties GDR authorities had defining and executing a clear vision of the society they hoped to establish, and she explains how television helped to stabilize GDR society in a way that ultimately worked against the utopian vision the authorities thought they were cultivating. Gumbert challenges those who would dismiss East German television as a tool of repression that couldn't compete with the West or capture the imagination of East Germans. Instead, she shows how, by the early 1960s, television was a model of the kind of socialist realist art that could appeal to authorities and audiences. Ultimately, this socialist vision was overcome by the challenges that the international market in media products and technologies posed to nation-building in the postwar period. A history of ideas and perceptions examining both real and mediated historical conditions, Envisioning Socialism considers television as a technology, an institution, and a medium of social relations and cultural knowledge. The book will be welcomed in undergraduate and graduate courses in German and media history, the history of postwar Socialism, and the history of science and technologies.

Cultural and Linguistic Minorities in the Russian Federation and the European Union Heiko F. Marten 2015-01-06 This is the first comprehensive volume to compare the sociolinguistic situations of minorities in Russia and in Western Europe. As such, it provides insight into language policies, the ethnolinguistic vitality and the struggle for reversal of language shift, language revitalization and empowerment of minorities in Russia and the European Union. The volume shows that, even though largely unknown to a broader English-reading audience, the linguistic composition of Russia is by no means less diverse than multilingualism in the EU. It is therefore a valuable introduction into the historical backgrounds and current linguistic, social and legal affairs with regard to Russia's manifold ethnic and linguistic minorities, mirrored on the discussion of recent issues in a number of well-known Western European minority situations.

Tamburlaine Christopher Marlowe 2014-06-18 One of the smash hits of the late 1580s and 90s, Tamburlaine established blank verse as the poetic line of English Renaissance drama, Edward Alleyn as the first English star actor and Marlowe as one of the foremost playwrights of his time. The rise and fall of a Scythian peasant-warrior who conquers the Middle East and is struck down by illness after burning the books of the Koran is presented in two parts crammed with theatrical splendour and equally ruthless cruelty. Marlowe's original audiences were delighted with the blasphemous and ruthlessly ambitious hero; the introduction to this edition discusses the problems that such a character poses for modern audiences and highlights the undercurrents of the play that lead towards a more ironic interpretation.

Global Citizenship Education Abdeljalil Akkari 2020 This open access book takes a critical and international perspective to the mainstreaming of the Global Citizenship Concept and analyses the key issues regarding global citizenship education across the world. In that respect, it addresses a pressing need to provide further conceptual input and to open global citizenship agendas to diversity and indigeneity. In recent years, the development of global citizenship education and the building of students global citizenship competencies have become a focal point in global agendas for education, international educational assessments and international organisations. However, the concept of global citizenship education still remains highly contested and subject to multiple interpretations, and its operationalisation in national educational policies proves to be challenging. This volume aims to contribute to the debate, question the relevancy of global citizenship educations policy objectives and to enhance understanding of local perspectives, ideologies, conceptions and issues related to citizenship education on a local, national and global level. To this end, the book provides a comprehensive and geographically based

overview of the challenges citizenship education faces in a rapidly changing global world through the lens of diversity and inclusiveness.

History of Management Thought Vadim I. Marshev 2021-01-13 This book describes the millennia-long process of the genesis, formation, struggle, and change of views on the management of social organizations in various countries around the world; in other words, it characterizes the worldwide evolution of the History of Management Thought (HMT) - ideas, concepts, theories, paradigms, and scientific schools - from Antiquity to the present. The book is the outcome of extensive research, based on the analysis, generalization, and systematization of foreign and domestic published literature, as well as on the gathering and analysis of unique archival materials. For the first time in the historical and managerial literature, the book puts forward original definitions of three historical and managerial sciences - the History of Management, the History of Management Thought, and the Historiography of Historical and Managerial Research. It addresses the main challenges in pursuing Historical and Scientific Research (HSR), the main "subject" levels of HSR and specific methodological problems concerning HMT, as well as epistemological methods for identifying key factors in and causes of the advent and evolution of HMT. This book presents both the origins of management thought dating back to the 5th millennium BC and the latest management concepts of the early 21st century. In particular, it traces the origins and sources of management thought, reflected in the works of thinkers and statesmen of the Ancient World (Egypt, Western Asia, China, India, Greece, and Rome), the era of feudalism, and the Middle Ages (Byzantium, Western Europe, and England), the era of inception capitalism (Western Europe and the USA), as well as the new and recent history of management thought of the 20th and 21st centuries. In addition, for the first time in History of Management literature, it presents the history of Russian

management thought from the 9th century to modern concepts and scientific schools.
