Context as Other Minds T. Givón 2005-07-22 Givon's new book re-casts pragmatics, and most conspicuously the pragmatics of sociality and communication, in neuro-cognitive, bio-adaptive, evolutionary terms. The fact that context, the core notion of pragmatics, is a framing operation undertaken on the fly through judgements of relevance, has been well known since Aristotle, Kant and Peirce. But the context that is relevant to the pragmatics of sociality and communication is a highly specific mental operation — the mental modeling of the interlocutor's current, rapidly shifting belief-and-intention states. The construed context of social interaction and communication is thus a mental representation of other minds. Following a condensed intellectual history of pragmatics, the book investigates the adaptive pragmatics of lexical-semantic categories — the 1st-order framing of “reality”, what cognitive psychologists call “semantic memory”. Utilizing the network model, the book then takes a fresh look at the adaptive underpinnings of metaphoric meaning. The core chapters of the book outline the re-interpretation of “communicative context” as the systematic, on-line construction of mental models of the interlocutor’s current, rapidly-shifting

states of belief and intention. This grand theme is elaborated through examples from the grammar of referential coherence, verbal modalities and clause-chaining. In its final chapters, the book pushes pragmatics beyond its traditional bounds, surveying its interdisciplinary implications for philosophy of science, theory of personality, personality disorders and the calculus of social interaction.

Implicit Psychology Wegner Daniel M 1977 "The first textbook expressly concerned with social cognition -- how people come to know their social world. It is simultaneously the first concerned with implicit psychology -- the largely unformulated theories or inferential rules that ordinary people use in understanding and predicting oneanother's behavior. ... This book earns very high marks. The material is organized beautifully. ... The writing is informal and clear. ... The author's concern with the behavioral consequences of social cognition is laudable." --Contemporary Psychology

Epistemic Modality, Language, and Conceptualization Jan Nuyts 2001 The relationship between language and conceptualization remains one of the major puzzles in language research. This monograph addresses this issue by means of an in depth corpus based and experimental investigation of the major types of

expressions of epistemic modality in Dutch, German and English. By adopting a systematic functional orientation, the book explains a whole range of peculiarities of epistemic expression forms (synchronically and diachronically), and it offers a clear perspective on which cognitive systems are needed to get from the concept of epistemic modality to its linguistic expression. On that basis the author postulates a sophisticated, layered view of human conceptualization. This book is of interest both to scholars working on modality and related semantic dimensions, and to the interdisciplinary field of researchers concerned with the cognitive systems involved in language use.
